

THE EVOLUTION OF WOUND CARE

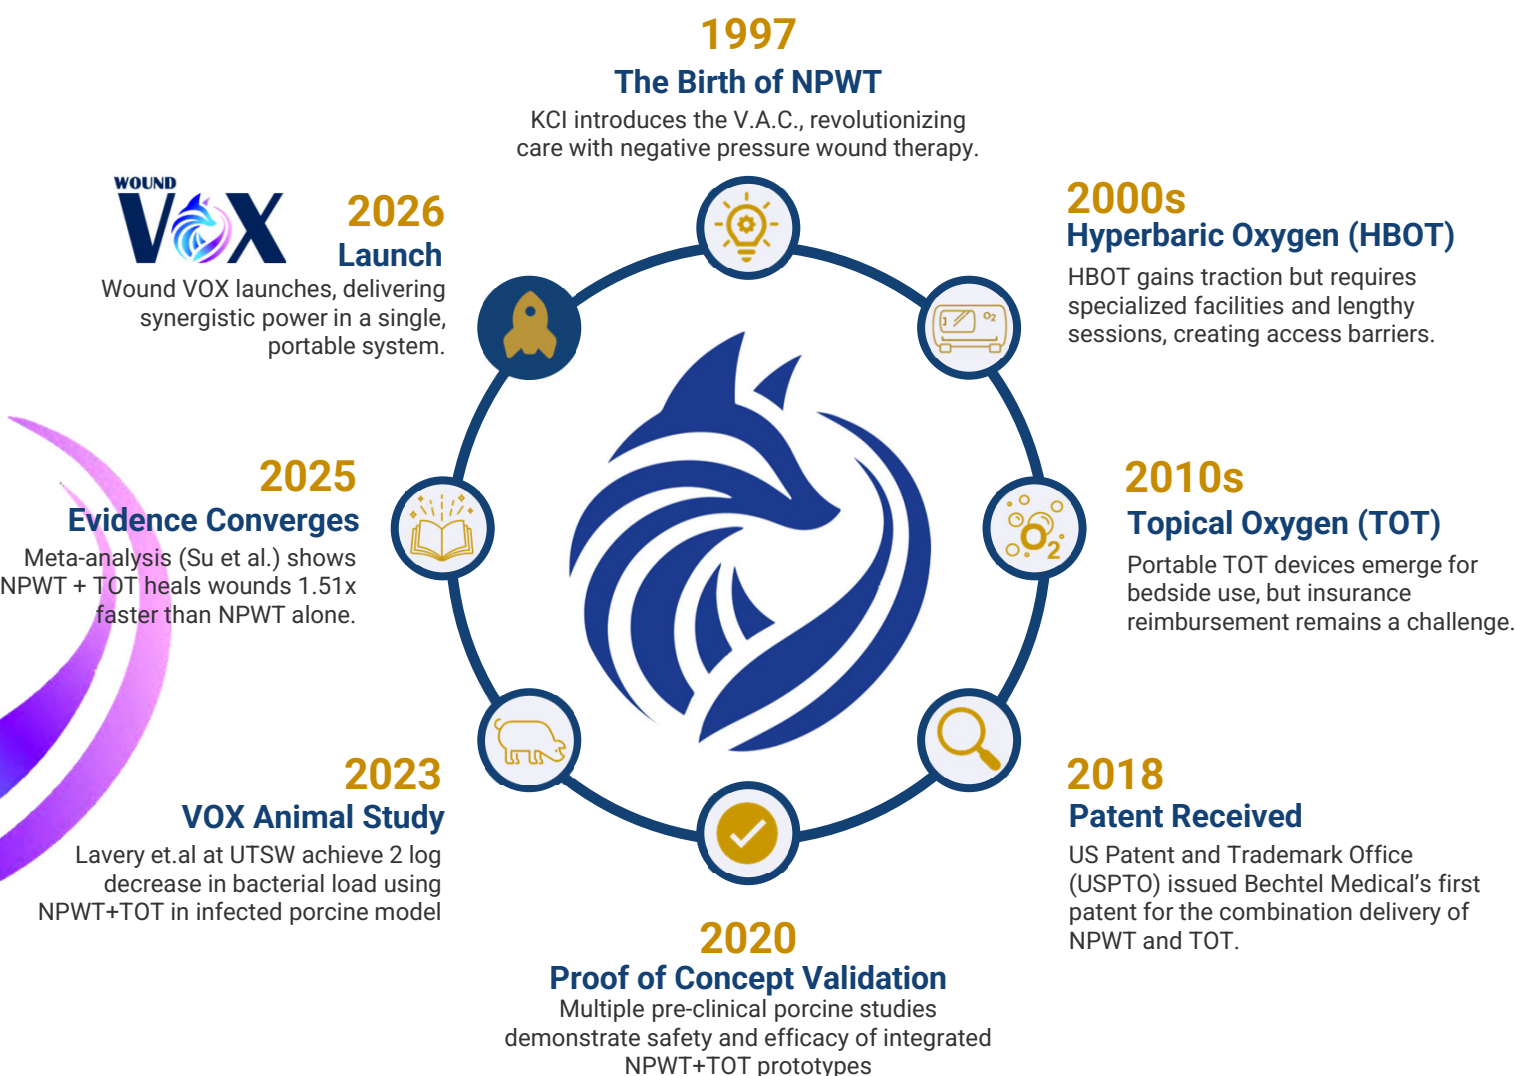

NPWT Establishes the Standard: Integrated into clinical practice guidelines, NPWT improves healing outcomes compared to conventional dressings.

Limitations of Continuous NPWT: Higher, continuous NPWT can create a hypoxic wound environment.

Oxygen Therapy Addressed the Gap: Topical Oxygen Therapy (TOT) increases tissue oxygenation and support improved wound healing but lacks exudate management.

Combination Therapy Shows Superior Outcomes: NPWT + TOT demonstrates improved results compared to either therapy alone.

Traditional Delivery Creates Burden: Using separate systems increases complexity – more equipment, dressing changes, training and cost.

THE FUTURE OF WOUND CARE
